By the end of this lesson, you will be able to...

Summarize basic reproductive body parts and their functions.

A Body with a Penis

Directions: Write the name of the organ above its definition.

uncircumcised penis

circumcised penis

Egg-shaped organs that make testosterone and sperm.

A tightly coiled tube where sperm mature.

This pouch makes a fluid that gives sperm energy and helps them move.

An organ made up of spongy tissue that fills with blood and becomes erect when a person becomes sexually excited.

This loose sac of skin holds the testicles and keeps them at the right temperature for making sperm.

The tube that carries mature sperm away from the testicles and holds them until they leave the body.

This gland makes a clear fluid that cleans
